

# Hydraulic Equipment Testing

Our hydraulic test rig is capable of testing individual hydraulic components as well as hydraulic equipment used both onshore and offshore with your fluid of choice. The extended testing is carried out to industry and equipment manufacturers requirements and standards.

## Equipment Tested

- Pumps
- Proportional Valves
- Hydraulic Cylinders
- Hydraulic Winches
- Accumulators

If a fluid touches it,  
we can test it!

## Typical Testing

- Pump testing including Variable Displacement Piston, Vane and Gear pumps
- New fluid testing and qualification of water and oil based hydraulic fluids
- Contaminated system fluid testing
- High and low temperature testing available
- Full strip downs and assessments - both before and after testing
- Filters
- Full Tribology lab including Four Ball and Falex testing
- Full lab services & fluid analysis
